NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
are represented as runs of N. The order of the pieces
to the gaps between them are based on estimates that have
provided by the submittor.
This sequence will be replaced
by the finished sequence as soon as it is available and
the accession number will be preserved.

1 1 86195: contig of 86195 bp in length
86196 86395: gap of unknown length

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a NADH dependent L-xylulose reductase enzyme protein and its encoding polynucleotide. The invention is useful in producing fermentation products or in conversion of cheap biomass to useful products. The present sequence is an Ambrosiozyma monospora NRRL -1484 NADH dependent L-xylulose reductase cDNA, ALXI (EC 1.1.1.10).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     producing fermentation

The present invention describes a method for monitoring differential CC expression of genes in a first filamentous fungal (FF) cell relative to CC expression of the same genes in one or more second filamentous fungal CC cells. The method uses fluorescence-labeled nucleic acids isolated from CC the FF cells and a substrate of expressed sequence tags (EST). The ESTs care used in the methods for monitoring differential expression of genes CC in a first filamentous fungal (FF) cell relative to expression of genes CC in a first filamentous fungal (FF) cell relative to expression of the methods for monitoring differential expression of the microorganisms to be improved. New genes may be discovered, CC global expression of genes from FF cells allows the production potential CC of the microorganisms to be improved. New genes may be discovered, CC possible functions of unknown open reading frames can be identified and GC gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture CC conditions, environmental stress, spore morphogenesis, recombination, CC metabolic or catabolic pathway engineering. Using ESTs provides several advantages over genomic or random CDNA clones including elimination of CC redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11247 CC represents ESTs from Nepergillus niger; AAF11854 to AAF11853 represents ESTs from CC ESTs from Aspergillus niger; AAF11879 to AAF11878 represents ESTs from CC invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Multiple gene expression; filamentous fungal cell; EST; expressed sequence tag; Fusarium venenatum; Aspergillus niger; Aspergillus oryzae; Trichoderma reesei; identification; recombina culture condition; environmental stress; spore morphogenesis; metabolic pathway engineering; catabolic pathway engineering; ss.

cc same genes in one or more second filamentous fungal cells. Monitoring the close spread on the expression of genes from FF cells allows the production potential cof the microorganisms to be improved. New genes may be discovered, cc possible functions of unknown open reading frames can be identified and cells conditions, environmental stress, spore morphogenesis, recombination, cc metabolic or catabolic pathway engineering. Using ESTs provides several cadvantages over genomic or random cDNA clones including elimination of cellular cells advantages over genomic or random cDNA clones including elimination of cellular cells 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the

CC microbial source: The invention also relates to a transformed plant CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant CC having an improved property comprises transforming a plant with the CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant with the CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests, CC increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of CC content, improved yield by modification of carbohydrate, nitrogen or CC content, improved yield by modification of carbohydrate, nitrogen or CC condition, improved lignin production or improved galactomannan CC providing improved lignin production or improved galactomannan CC production. This sequence represents a bacterial polymucleotide used in the scope of the invention. Note: The sequence data for this patent did cc not form part of the printed specification but was obtained in electronic format from USPTO at segdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pathogen tolerance; pest tolerance; plant disease resistance;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC improved properties, e.g. improved conditions, pathogens or pests, content, improved yield by modification of carbohydrate, nitrogen or conditions, pathogens or plant did and/or construct and growing the transformed plant, where the polymucleotide or polypeptide is useful for improving plant properties. CC improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by condition, improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan cc production. Note sequence represents a bacterial polynucleotide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at segdata.uspto.gov/sequence.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop planch as maize or soybean. The method of producing a transformed plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a modified NADPH-dependent carbonyl CC reductase. The polymucleotide was modified using using the method of the C invention. The specification describes a method for designing a synthetic CC polymucleotide. The method comprises providing a starting polymucleotide, CC determining the predicted free energy of folding per base of the CC polymucleotide, modifying the polymucleotide by replacing a codon with a CC different codon to provide a modified polymucleotide, determining free CC energy of folding per base of the modified polymucleotides, and comparing CC this with that of the original polymucleotide. The method is useful for CC developing nucleic acid sequences that enhance expression of the encoded CC protein in a heterologous host. The design and preparation of the encoded CC synthetic genes are used in application of gene shuffling, directed CC evolution and molecular breeding methods. The method allows expression of CC evolution and molecular breeding methods. The method allows expression of CC spield such as commencially viable levels, in particular proteins with low that commercially viable levels, in particular proteins with low

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FP) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be identified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11247 represents ESTs from Pusarium venenatum; AAF11248 to AAF1183 represents ESTs from Aspergillus niger; AAF11854 to AAF14878 represents ESTs from Aspergillus niger; AAF11854 to AAF14878 represents ESTs from Aspergillus niger; AAF118579 to AAF15337 represents ESTs from Aspergillus oryzae; and AAF14879 to AAF15337 represents ESTs from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (NOVO)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Aspergillus oryzae

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polynucleotide; gene; ss.
microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                               The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bacterial polynucleotide #2123.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2004-061375/06.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (SLAT/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (CAOY/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-FEB-2002; 2002US-0360039P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polynucleotide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.

The method of the invention is useful for increasing seed and organ size of a plant. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               a DNA construct comprising a promoter that functions in plants and selecting a desired plant from a population of transformed plants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            comprising the recombinant DNA construct and a method of producing a crop plant of transformed plant is a crop plant of transformed plant is a crop plant of transformed plant is a crop plant of such as maize or soybean. The method of producing a transformed plant construct and supported property. The plant is a crop plant of the property of the plant is a crop plant of the property of the plant is a crop plant of the plant of transformed plant with the construct and growing the transformed plant with the construct and growing the transformed plant where the construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plant properties. The recombinant DNA construct is useful for producing plant properties. The recombination of protein pathogens or pests, concreased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of the cell cycle pathway with plant growth regulators, increased rate of condetent, improved yield by modified seed oil or protein yield and/or construct, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition. This sequence represents a bacterial polynucleotide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic forms from INSTOR of the printed specification of the production.

                                                                                                                                                                                                                                          The present invention describes a method for monitoring differential cc expression of genes in a first filamentous fungal (FF) cell relative to cells. The method uses fluorescence-tabeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTS care used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes con a first filamentous fungal (FF) cell relative to expression of the ESTS confidence of genes in one or more second filamentous fungal cells. Monitoring the commence of the microorganisms to be improved. New genes may be discovered, conditions of genes from FF cells allows the production potential configurations of unknown open reading frames can be identified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, configuration of the expression conditions, environmental stress, spore morphogenesis, recombination of credundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11247 corporation from Aspergillus niger; AAF11854 to AAF11853 represents ESTs from Aspergillus oryzae; and AAF14879 to AAF15337 represents ESTs from the present invention.

            This invention relates to a novel method for the preparation of an optically active alcohol by assymetric reduction of a ketone with a enzymatic material having tropinone reductase-1 activity, in the prof a reduced co-enzyme. Optically active alcohols are useful in the preparation of optically active compounds, for example (R)-3 quinuclidinol is an intermediate in the preparation of therapeutic agents. These can be used, for example, for the treatment of
                                                                                                                               Claim 9; Page 20-21; 30pp; English
                                                                                                                                                               cropinone
                                                                                                                                                                           Preparation of optically via asymmetric reduction
                                                                                                                                                                                                                                                                   Yamamoto
                                                                                                                                                                                                                                                                                                                                                                                    06-DEC-2002; 2002EP-00027311

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       invention, enables more efficient production of optically active alcohols. The present sequence is the Datura stramonium (jimsonweed, common thornapple) tropinone reductase-1 gene sequence. The protein encoded by this gene was utilised in the method of the invention
